Message from the President, Doug Caplan

As the global economic crisis has provided unique challenges, as well as opportunities, it has been our goal to stay ahead of the curve and press forward. No economic downturn lasts forever and we certainly have great optimism for the future. We continue to beat the trends and stay ahead of the curve through our hard work and business integrity combined with genuine skill and experience that this industry will always demand. DECCON started servicing clients during the last recession and you can count on us to be around well after the current one.

We are known for the quality of our drawings and our 3D modeling capabilities. Take a look at the projects page on our website and you'll see what we mean. Our models set the standard. Quality models done by experienced professionals lead to quality 2D shop drawings. We don't take the term 'professional' lightly.

Professional is, as professional does. Our clients know that low price and low cost are often entirely opposite to each other. Cheap detailing is anything but cheap and in the current economy who can afford to throw money out the window. It's not a secret that a job done right will cost a little more. Poor drawings lead to fabrication errors, and poor erection diagrams cause nothing but problems for the site, reflecting poorly on everyone on the job team--especially the fabricator. Remember, if the drawings you submit don't look professional, neither do you. It's OUR job to get YOUR job done right the FIRST time, and to do it in a way that makes you, our client, look great. We look forward to working with like minded clients who truly understand the value we offer.

Recently Awarded Projects

First in North America coming to Vernon

DECCON was recently awarded the steel detailing contract for the prestigious **Sparkling Hill Resort & Wellness Hotel** in Vernon. This will be the first hotel project in North America incorporating Swarovski Crystal elements into every aspect of its design. We were chosen because of our extensive experience combined with our proven 3D modeling and detailing capabilities. When it comes to quality steel detailing the proof is, as they say, in the pudding, and we are always looking to push ourselves a bit further than what we thought possible.

Driving the new Port Mann frame

DECCON was awarded the steel detailing contract for Pier N1, a **220 ton pile driving template for the new Port Mann Bridge**. This pile driving template is capable of guiding 1.8M Diameter x 73M long segments into the river bed. The new Port Mann Bridge will help bring added prosperity to the Lower Mainland, by providing much better access than what could ever have been achieved with the current outdated bridge.

Recently Completed Projects

Structural steel for Morgan Crossing

DECCON recently completed detailing the structural steel package for Morgan Crossing in South Surrey [White Rock]. We detailed over 150 canopy frames, all with different configurations; an Architects dream, but a detailers challenge, and we were more than up to that challenge. Despite countless issues with on-site concrete problems, we were able to co-ordinate between the site and our client and get the job done right! Our staff must be commended for all the hard work and attention to detail needed to complete this job and every job we work on!
